

PRAVEENGANTH V

Full Stack Developer

React.js | Node.js | TypeScript | Healthcare | AI | SaaS

Chennai, India | +91-9500915939 | vpraveenganth666@gmail.com | linkedin.com/in/praveenganth-v | github.com/praveenganthp

PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience designing and building scalable, secure, and high-performance web applications for healthcare, AI, and SaaS products. Proficient in React.js, TypeScript, Node.js, Express.js, MongoDB, Redux Toolkit, and RTK Query, with additional experience integrating FastAPI services for AI-driven workflows. Skilled in building reusable component architectures, optimizing REST API performance, and implementing CSP-compliant, XSS-resistant frontend systems for enterprise and government healthcare platforms. Experienced in delivering responsive, accessible user interfaces within Agile teams, translating complex clinical and operational workflows into intuitive, production-ready software.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI (Python), REST API Design

Database: MongoDB

State Management: Redux Toolkit, RTK Query, Context API, Custom Hooks

Styling: Tailwind CSS, Material UI (MUI), Bootstrap, Framer Motion, GSAP

Developer Tools: Git, GitHub, Postman, Swagger, Chrome DevTools, VS Code

Core Concepts: Reusable Component Architecture, Atomic Design, Responsive Design, Performance Optimization, Lazy Loading, Code Splitting, Accessibility (WCAG 2.2), CSP & XSS Security, JWT Authentication, Role-Based Access Control, Agile/Scrum, SDLC

Cloud & APIs: REST API Integration, API Caching, MQTT (Real-Time Data)

WORK EXPERIENCE

Frontend Developer — Plenome Technologies Pvt Ltd

Mar 2024 – Present | Chennai, India

- Engineered scalable, production-grade web applications using React.js, TypeScript, Redux Toolkit, Tailwind CSS, and MUI, shipping features across multiple enterprise product lines.
- Architected a reusable frontend component library grounded in Atomic Design principles, eliminating duplicate UI code and enabling faster, more consistent feature delivery across teams.
- Engineered REST API integrations and authentication flows in close coordination with backend engineers, strengthening data reliability and simplifying frontend state management.
- Diagnosed and resolved performance and accessibility bottlenecks across production applications, improving page responsiveness and WCAG 2.2 compliance.
- Partnered with product managers, backend engineers, and QA within Agile sprints to translate business requirements into shipped, tested features.

Frontend Intern — Automios

2023 – 2024 | Chennai, India

- Built and shipped production React.js features styled with Tailwind CSS under senior engineering mentorship, contributing directly to live releases.
- Engineered reusable UI components and REST API integrations, improving consistency and reducing development time across responsive web interfaces.
- Debugged production issues and delivered features within Agile sprints, building a strong foundation in end-to-end SDLC practices.

PROJECTS

Transtam / OTMS | Organ Transplant Management System — Tamil Nadu Government

A healthcare platform built for the Tamil Nadu Government to manage organ transplant workflows, hospital coordination, and sensitive medical data across multiple stakeholders.

Tech Stack: React.js, TypeScript, Redux Toolkit, RTK Query, Tailwind CSS, MUI, Context API, CSP Security

Key Contributions

- Engineered secure, production frontend modules powering organ transplant workflow management and hospital coordination for a Tamil Nadu Government healthcare platform.
- Hardened the application against client-side vulnerabilities by implementing CSP-compliant, XSS-resistant frontend architecture to protect sensitive medical and patient data.

- Diagnosed scalability and redundant API-call issues in the original Context API implementation, then led the migration to Redux Toolkit and RTK Query to centralize state and resolve bottlenecks as the platform scaled.
- Cut redundant network requests using RTK Query's caching and normalized data layer, improving application responsiveness for hospital staff.
- Designed a library of reusable, workflow-specific UI components, standardizing development patterns across transplant management modules.

Ashwin AI | *AI-Powered Medical Documentation Platform*

An AI-driven platform that converts doctor-patient conversations into structured medical documentation, reducing manual charting effort for clinicians.

Tech Stack: React.js, TypeScript, Redux Toolkit, Tailwind CSS, Python, FastAPI

Key Contributions

- Led frontend development for an AI-powered platform that transcribes doctor-patient conversations into structured clinical documentation.
- Built audio-recording and speech-to-text interfaces that auto-generate SOAP notes and case sheets, eliminating manual documentation steps for doctors.
- Integrated FastAPI backend services to support real-time AI processing and data handling within the frontend application.
- Engineered reusable UI components under Atomic Architecture, improving consistency and accelerating development velocity across the platform.
- Optimized responsive UI and state management for reliable, low-latency performance in high-pressure hospital environments.

Election SaaS Platform | *Real-Time Election Monitoring — IITM Hostels*

A multi-election SaaS platform enabling real-time vote tracking, bulk data management, and live administrative dashboards.

Tech Stack: React.js, TypeScript, Redux Toolkit, MQTT, Tailwind CSS

Key Contributions

- Engineered frontend modules powering a multi-election SaaS platform capable of managing concurrent elections on a single system.
- Integrated MQTT to stream live vote counts and election results in real time to administrators and monitors.
- Built CSV-based bulk upload workflows, streamlining candidate and voter data management for election administrators.
- Designed responsive, real-time dashboards and analytics views for election monitoring and reporting.

Full Stack E-Commerce Platform | *Admin & Customer Web Application — Eyewear Business*

A full stack e-commerce platform with separate admin and customer-facing modules supporting product, inventory, and order management.

Tech Stack: React.js, TypeScript, Node.js, Express.js, MongoDB

Key Contributions

- Built a full stack e-commerce platform with distinct admin and customer-facing portals using React.js, Node.js, Express.js, and MongoDB.
- Engineered inventory, product, and promotional-offer management systems powering the platform's admin operations.
- Implemented authentication, order management, and responsive product discovery features, including filtering and listing pages, for the customer portal.
- Collaborated across frontend and backend layers to maintain a clean, maintainable full stack architecture from schema design to UI.

CERTIFICATIONS

- Full Stack Development (MERN) — GUVI, Chennai
- WCAG 2.2 — UI/UX Accessibility & Usability

EDUCATION

Bachelor of Science in Chemistry — Don Bosco College, Dharmapuri

2017 – 2020 | GPA: 8.4
